

Convert GSD to WPC with Pazzles Pro Software

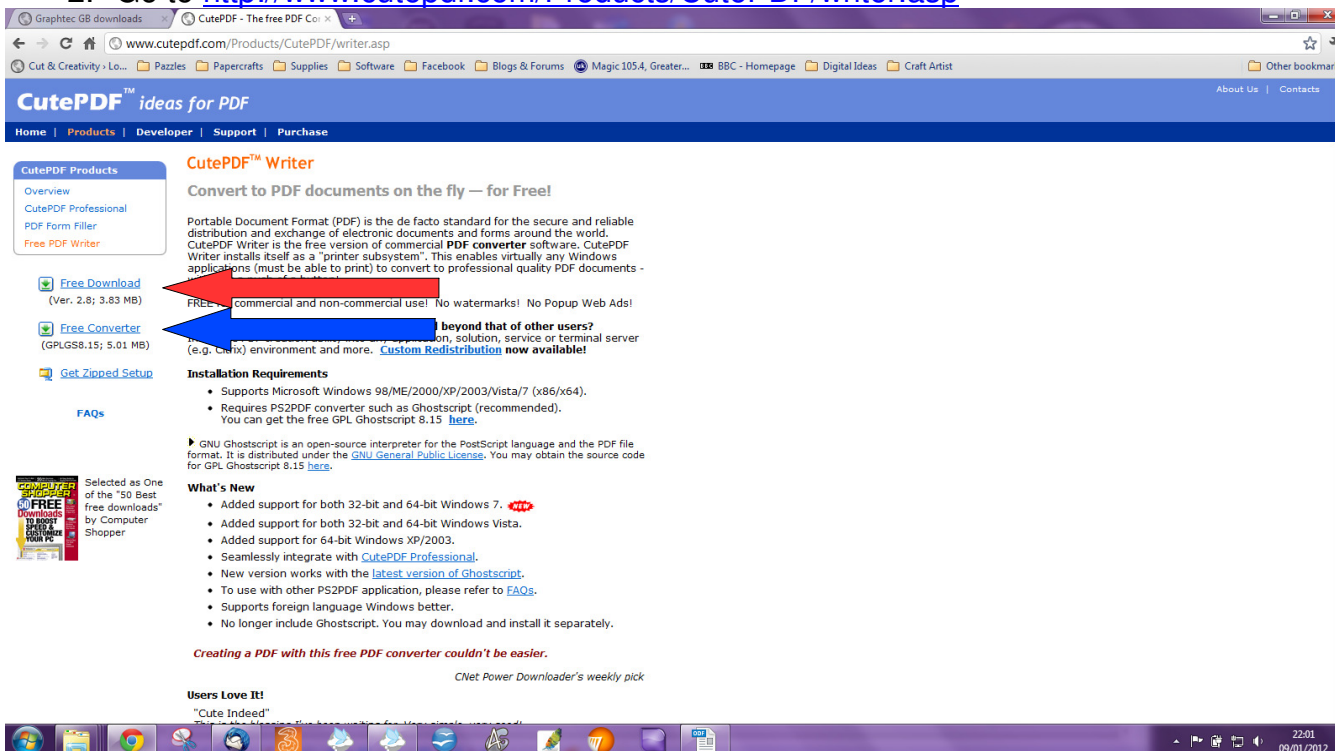

You will need to install a couple of things to do this

1. Download the Craft Robo Software from <http://downloads.graphtecgb.com/support/>

Download Robomaster Software v5.1, Controller & driver (Windows XP, Vista, 7 – 32bit & 64bit) see red arrow above, unzip it and install it on your Computer.

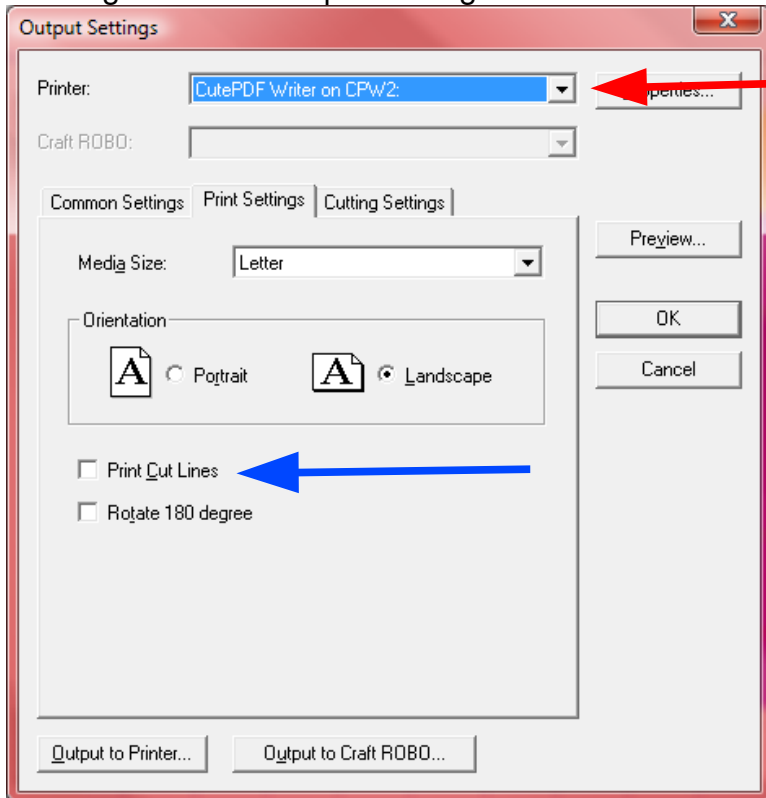

2. Go to <http://www.cutepdf.com/Products/CutePDF/writer.asp>

Download and install – Free Download (red arrow above) and Free Converter (blue arrow above).

3. In the Craft Robo software Open the GSD file you want to convert.

4. go to File-> Output Settings

Select the CutePDF writer (Red arrow) above and make sure that the Print Cut Lines (Blue arrow) above is ticked, then click on Output to Printer and follow the screens to save to the folder of your choice.

5. Open your Pazzles Pro Software and create a new page.

6. Then go to File ->Import ->EPS, AI, PDF (Vector Only) and go to the folder you saved to in 4. above and click Open. Pazzles will do its work and convert the file, you may need to make a few modifications to get it the way you want it but this will do the bulk of the work for you.
