

Embossing Edges like Nestabilities & More

I have been experimenting with recreating the edge embossed effects that you get when using Spellbinders Nestabilities dies.

I am not sure if you will be able to see the detail of the samples in my photo's but I will explain what I have done so that you can try it for yourselves.

This was all done using the Standard 12" x 12" mat on a sheet of Anna Marie Designs Bazzix textured card.

Images above clockwise from top left - single outline embossed and cut outline, single line pen and cut outline, multi outline 0.03 x 9 pen and cut, multi outline 0.03 x 9 pen cut inside to create frame, multi outline 0.03 x 9 emboss, multi outline 0.03 x 9 emboss and cut outline.

Create your shape and then multi outline 0.03 x 9 Using the standard mat, use the emboss tool on its own to create the above effect.

For the effect below as above but change the outermost line colour, then using the standard mat, use the emboss tool first and then without removing your mat change to the blade tool and cut the outline.
